

THE VIEWER — Architecture & Data Flow

Dark standard (rule R3) · offline · backwards-compatible (R1)

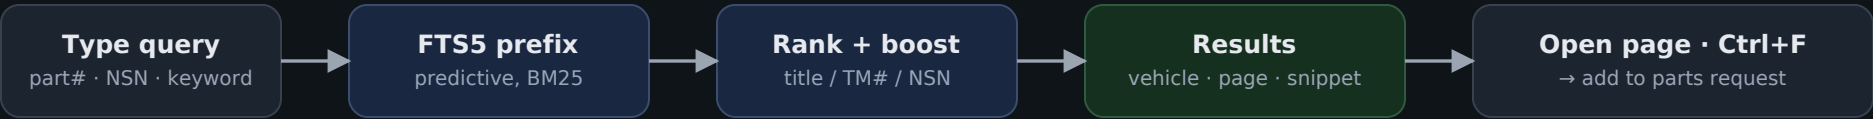

1 · System Architecture

2 · Ingestion Data Flow & Queue

3 · Search Query Flow

4 · Data Model (versioned · additive)

store / table engine / user data text index / output queue (OCR/jobs)

All tables added by numbered, additive migrations (R1). New columns are nullable; nothing is dropped destructively; the index is rebuildable from the read-only corpus.

Rule R3 — professional dark theme + PDF export. Rule R2 — a diagram ships with every addition. Rule R1 — backwards-compatible, rollbackable.
