

THE VIEWER — Two builds, one core

shared codebase + index schema · selected by profile flags (--gpu / --dpi / --workers) · R1 backwards-compatible

SHARED CORE (one codebase)

viewer_ingest · viewer_app · ui · migrations

crawl · text-first · RapidOCR · FTS5 search

document viewer · 104th parts request

viewer.db (SQLite + FTS5, versioned)

★ ADVANCED / GPU PRODUCTION (priority)

Master: THE VIEWER

- RapidOCR on NVIDIA GPU (onnxruntime-gpu)
- ~10-30× faster OCR · 8 threads · 200 DPI
- builds the master index fast

run_ocr_gpu.bat (--gpu --workers 8 --dpi 200)

run_indexing.bat · run_app.bat

CPU fallback if CUDA isn't ready (never hard-fails)

LITE / PORTABLE (weaker PC)

Generated: THE VIEWER PORTABLE

- self-contained folder + one-click SETUP.bat
- ships the FINISHED index → search-only, instant
- both modes: can also CPU-index/OCR slowly

SETUP.bat · START.bat

run_ocr_lite.bat (--workers 2 --dpi 150)

CPU only · no GPU/driver needed · carry on USB

make_portable.bat →

Build once on the GPU box, then generate the portable folder and carry it to the weak PC.

GPU production (priority)

Lite portable

shared core

packager
