

# Interactive CAD — the CAD image now rotates, zooms & scales v0.92.0

Same renderer, now a turntable: grab the CAD image and spin it. It stays the real CAD render — shaded, coloured, textured, dimensioned.

## HOW IT WORKS

green = built on what already existed · amber = the new pieces. BOTH stay: ☐ CAD image (static, default) + ☐ Rotate CAD (interactive) — separate tabs, like the 3-D / schematic viewers.

## WHAT THE MECHANIC CAN DO (same feel as the 3-D model)

## SCALES WITH THE BUILD (RPS) — GPU-FREE ON EVERY TIER

## VERIFIED (host-side)

- VERIFY-CADSPIN.bat → verify\_cadspin.py rendered turntables for a bearing, a bolt and a gear.
- Proof montage docs/cadspin\_proof.png shows the hex head, gear teeth and bore VISIBLY rotating frame-to-frame.
- Shading + the H/L dimension callouts are preserved on every frame — it's still a CAD drawing, just rotatable.
- Both pages' inline JS + cad\_render.py + viewer\_app.py parse host-side; cadview.js passes node --check. (R1)
