

Corpus-wide vectorization batch v0.99.5

Pre-render every figure page to crisp SVG once, so the □ Vector view opens instantly instead of vectorizing on demand.

figure pages

parts.fig_no -> distinct
(document_id, page) + path.
read-only on the index.

vectorize.ensure

render page (fitz) -> OpenCV
potrace-style -> SVG. cached
index/veccache/<doc>_<pg>_<dpi>.svg.
skip if already cached (resumable).

coverage

index/vectorize_coverage.tsv:
doc, page, svg_bytes, contours.
parallel: cpu_count-1 (cap 10).

VERIFIED / NOTES

- build_vectorize.py parses; reuses the proven 0.99.4 vectorizer (docs/vectorize_proof.png).
- BUILD-VECTORIZE.bat runs the full set (resumable, parallel); --limit for a quick slice.
- Same shape as build_schemgraph / make_cad (host batch, sidecar-only, R1/R6). Degrades cleanly without OpenCV.
- Deepens 0.99.4: on-demand vectorization -> corpus-wide precompute, so figures are instantly crisp.
