

Job Card, deeper — understands the task, warns on look-alikes v0.99.10

From 'a part' to 'a job': free-text intent, materials & referenced manuals, a look-alike safety warning, and a preview-first builder page.

WHAT GOT RICHER

- procedures_feature._parse_procedure now also pulls MATERIALS / CONSUMABLES and referenced manuals (TM/WP/LO/TB/TC) —
additive keys, so /procedure benefits too. Digit-anchored regex: 'LOCKWASHER'/'LOOSEN' no longer false-match as refs.
- jobcard.build_pdf renders a Materials section + a 'Referenced manuals' line per procedure.
- Cover gets a ⚠ BEFORE YOU START box when same-name parts differ by UOC/CAGEC/SMR/FSC/part-# (not mere for drift).
- Free-text task intent biases the right procedure kind to the top of the order.

/jobcard — preview-first builder

replace the alternator

Task ReplacementNSN 2920-01-...

⚠ LOOK-ALIKE: 2 parts share this name — confirm UOC/NSN

Procedures 2 · Torque 3 · Parts 11 · Figures 6

Generate Work Order

VERIFIED / R1

- _parse_procedure tested standalone: materials + tools + cautions + steps captured; refs digit-anchored (no 'LOCKWASHER'); steps-only pages still parse.
- jobcard intent/order/warning tested standalone: replace→Replacement, adjust→Adjustment, matching kind floated first, warning only on real look-alikes.
- build_pdf smoke-rendered a 2-page PDF with the Materials section + the ⚠ BEFORE YOU START box present (verified via fitz text extraction).
- jobcard.html inline JS passes node --check; added to verify_ui.py + VERIFY-099.bat. /jobcard registered in _PAGES; route signature fixed for lookalike.
- All read-only; additive keys + one module + two routes + one page + one parser enrichment. Nothing writes the index (R1/R6). Host-verify pending in VERIFY-099.bat.
