

My Bench — pin what you're working on v0.99.21

A localStorage favorites space: pin a dossier / procedure / torque / figure and jump back instantly. Delivered via palette.js → on every page, no per-page edits.

HOW IT WORKS

- On any page, the ☆ pin pill (bottom-right, beside ⌘K jump) saves {url, title, query} to localStorage 'viewer_bench'.
- /bench lists your pinned items — open (new tab), remove, or clear the bench.
- ★ My Bench is a command in the Ctrl+K palette; the whole thing rides palette.js so it reaches all 20+ pages.
- ES5-safe + persists across sessions; excluded on home and on /bench itself.

VERIFIED / R1

- bench.html inline JS passes node --check; pin/list/remove all localStorage, no backend.
- ☆ pin pill + ★ My Bench command added to palette.js (reaches every page); /bench in _PAGES + verify_ui.py.
- Additive & rollbackable: one page + palette additions. Nothing writes the index (R1/R6).
