

Fastener reference — identify a thread v0.99.22

Major diameter (in+mm) and threads-per-inch / pitch for common UNC / UNF / ISO metric sizes — exact standard geometry — with links to torque and manual usage.

SIZE MAJOR DIA THREADS/PITCH CLASS FIND				
1/2-13	0.500 in · 12.70 mm	13 TPI	UNC	Torque · In manuals
3/8-16	0.375 in · 9.53 mm	16 TPI	UNC	Torque · In manuals
M10	0.394 in · 10.00 mm	1.50 mm	METRIC	Torque · In manuals
...30+ sizes · filter by typing or by class tab (All / UNC / UNF / Metric)				

VERIFIED / R1

- Geometry is exact standard (inch major-dia + TPI; metric pitch) — verifiable engineering reference.
- Torque is DELIBERATELY deferred to the TM (bold caveat): each row links to /torque and /?q= — never a generic chart on safety-critical joints.
- Client-side (offline, ES5); inline JS passes node --check. Wired: /fastener + ☐ in palette + Tools menu + verify_ui.py.
- Additive & rollbackable: one page + two menu entries. Nothing writes the index (R1/R6).
