

Parts-request PDF + barcodes · structured PMCS v0.99.26/27

▣ **Parts-request PDF (partspdf.py + /api/partspdf)**

- Printable Parts Request sheet: unit / mechanic / bumper / TM header + item table, with a scannable
- Code128 barcode of each NSN so supply SCANS instead of retyping. Local-purchase items (no NSN) get no barcode.
- Pure reportlab, offline. Verified in-sandbox: valid PDF, barcodes rendered (docs/partspdf_proof.png).

▣ **Structured PMCS items (pmcs.py + /pmcs)**

- pmcs.find now extracts the individual CHECK ITEMS (numbered rows + CHECK/INSPECT/CLEAN/... lines),
- not just a page snippet — the finder lists the actual checks per page, with the interval chips it already had.
- Verified in-sandbox: pulls 'check engine oil', 'inspect belts', 'ensure parking brake holds', 'drain separator'; ignores prose.

R1 · additive & read-only. reportlab barcode = existing dep; PMCS parse is pure regex over the OCR text.
