

THE VIEWER — UX audit & dynamism roadmap

Goal: more dynamic + end-user friendly for shop-floor mechanics (junior & SME) · dark (R3)

✓ WHAT WE HAVE

- Onboarding + express field
- Predictive FTS5 search
- Full-NSN search (part + vehicle)
- Vehicle breakdown hub
- Document viewer + page render
- Schematics & install panel
- 104th parts-request PDF
- Dark theme · offline · resumable
- 1.87M pages searchable (OCR ongoing)

Solid engine + core flows. Functional, not yet "grab-it-on-the-floor" friendly or visually dynamic.

△ UX GAPS

- No home / browse-by-vehicle
- Desktop-only (no phone/tablet/touch)
- Raw OCR snippets · no filters/counts
- Viewer: no zoom / thumbnails / highlight
- No saved / recent requests & searches
- No simple ↔ advanced (junior/SME) mode
- Schematics are static (vision = interactive)
- Sparse empty-states / guidance / polish
- Modal required every time

Most friction is discoverability, field ergonomics, and making results/graphics feel alive.

★ PROPOSED (prioritized)

- 1 · Home: browse-by-vehicle + recents
dynamic grid from the index · discoverable
- 2 · Responsive + touch + large-text
works on phone/tablet · simple↔advanced toggle
- 3 · Smart results: filters + counts + cards
by vehicle / manual type / text:OCR · cleaner
- 4 · Viewer: zoom + thumbnails + highlight
find-in-doc · jump to the hit on the page
- 5 · Saved / recent requests & sessions
reopen, edit, re-export (data already in DB)
- 6 · Interactive dynamic graphics (vision D)
clickable callouts on schematics · simple+advanced
- 7 · Polish: branding, skeletons, toasts
guided empty-states

Quick win bundle: 1 + 3 + 4 (most "alive" for least lift)

All additive (R1) · each ships with diagram (R2), dark+PDF (R3), changelog (R4), visual panel (R5).

#6 (interactive graphics) is the project's vision-level "dynamic diagrams" goal — the biggest lift; best after the OCR/structured-data work.

Engine/search are already fast; this pass is about the front-end feeling dynamic and being usable in a motor pool.
