

Release prep — one button to green-light, one to cut 1.0 v0.99.34

RUN-ALL-VERIFY.bat → docs\run-all.log

1. VERIFY-099 (syntax·audit·completeness·snapshot·UI-JS·regression·fuzz smoke) → 2. HTTP fuzz (no 5xx) → 3. Mutation (test-quality) → 4. Build visual index

Long jobs stay SEPARATE (run when ready): RESUME-OCR · BUILD-EMBEDDINGS · BUILD-INSTALLER.

CUT-V1.0.bat → engine\cut_v1.py

- Run ONLY after RUN-ALL-VERIFY is clean. Takes a safeguard snapshot (rollback point), stamps VERSION=1.0.0,
- banners both changelogs with a [1.0.0] entry, and regenerates the iteration snapshot so it still MATCHES (R10).
- Refuses to re-cut if already 1.x; prompts before it commits. Human notes: docs/RELEASE-NOTES-1.0.md.

R1 · additive tooling; cut_v1.py verified (pares + completeness-clean). The feature set is well past 1.0 scope; this makes the cut a single command.
