

Measurements & dimensions — pull every measured value out of the text v1.1.0

Dimension types covered

- length
- area
- angle
- weight
- force
- torque
- pressure
- capacity
- electrical
- temperature
- flow
- speed
- rotation

Optional corpus-wide sidecar

BUILD-MEASURES.bat → build_measures.py walks every page and writes index/measures.db (append-only, viewer.db — R1/R6). Enables fleet-wide browsing/counts, e.g. 'every torque spec across all vehicles'. Resur doc.

The guarantee

Closes the 'especially measurements/dimensional data' gap: beyond finding the PAGE, the mechanic g NUMBERS themselves — value, range, tolerance, unit — cited and machine-checkable. Full map in docs/EXTRACTION-COVERAGE.md.

Additive & rollbackable (R1). Self-test: 19 measurements across all target types — PASS.
