

External gap-fill — cross-reference the internet to complete blanks v1.1.2

The corpus is ALWAYS authoritative. External data only fills dimension types the manuals are silent on.

1 OPT-IN, ONLINE, HOST-RUN — ENRICH.bat → build_enrich.py (the ONLY networked component)

2 OFFLINE — the running app only READS enrich.db (no network ever from the server)

Guardrails

External values NEVER overwrite or contradict a corpus value · surfaced ONLY where the corpus is silent · always badged 'external-unconfirmed' with full provenance · app stays 100% offline (network only in the opt-in h untouched, sidebar append-only (R1/R6).
