

Masterfile where the work happens — Work Order · builder · dossier v1.1.6

The consolidated dimensions now appear inline in the mechanic's views — corpus authoritative, no links (R11)

Why it matters

The dimensional data recovered across the whole wave — measured from the manuals, gap-filled from the Wayback-archived web, consolidated in the Masterfile — now lands directly on the bay-ready Work Order a actually needs a clearance, capacity, or torque. Manuals stay the source of truth; external values are labelled and unlinked.
