

Toward a self-standing repository — 5 new extractors + Masterfile intelligence v1.2.0

R12: pull ALL the information (catalog \$) so the tool stands alone; corpus authoritative, sidecar-only

New extractors (each self-tested, in VERIFY-099)

units.py §3.2

- Dual-unit convert/display
- in↔mm · ft-lb↔N-m · °F↔°C
- gal↔L · psi↔kPa · lb↔kg

NORMALIZE

leadingspecs.py §3.6

- 'Label: value unit' pairs
- named specs → Masterfile
- in build_measures

KEY:VALUE

specparse.py §3.7/3.8

- thread · fit · Ø±tol
- MIL-SPEC · MS/AN/NAS
- fuel · lubricant
- /api/specs

ENGINEERING

pdfmeta.py §5

- outline (chapters)
- metadata · links
- annotations
- /api/pdfmeta

PDF-NATIVE

barcodes.py §4.9

- QR / Data-Matrix / 1-D
- OpenCV-QR (pyzbar opt.)
- scrapes NSNs

MACHINE-READ

Masterfile intelligence

read-time enrichment (no rebuild)

- dual-unit alt on every filtered row
- wide-variance flag (_spread, §9.2)
- system: imperial/metric

for_subject()

coverage() gap dashboard

- per subject: dimensions covered
- which of 13 types still MISSING
- /api/master_coverage

TARGET ENRICHMENT

dossier: Specs & standards card

- threads · MIL-SPEC · fluids
- beside Key dimensions
- cited to the page

/dossier · /api/specs

Everything flows into the Masterfile

native text · OCR · tables · measurements · leading-particulars · threads/MIL-SPEC · PDF outline · barcodes → consolidated, deduped, dual-unit, variance-flagged, gap-tracked — a repository that answers on its own, corpus a (R11/R12).
