

Structured-source jackpot — IETM/S1000D XML + the knowledge graph v1.3.0

▣ ietm.py \$6.2

- S1000D data modules / IETM / MIL-STD-40051 XML
- namespace-agnostic stdlib xml.etree
- → title · warnings · cautions · notes · steps · tables
- + measurements — richest, cleanest source (no OCR)
- /api/ietm

ALREADY-TAGGED DATA

▣ kg.py + build_kg.py \$3.11 / \$7.4

- part ↔ figure ↔ procedure ↔ spec ↔ NSN ↔ vehicle
- triples from viewer.db + masterfile + figureparts
- 'everything about X' = one hop
- append-only index/kg.db · /api/kg
- BUILD-KG.bat

KNOWLEDGE GRAPH

R12 progress — the two big structural methods landed

The catalog is now ▣ across §2.2/2.3/2.6 (tables+cleanup), §3.2/3.6/3.7/3.8/3.9/3.10/3.11 (units, leading-particulars, threads/MIL-SPEC, safety, acronyms, relations), §5.1-5.5/5.8 (PDF-native), §6.2 (IETM/S1000D are the vision-heavy few: rotation-aware GD&T from drawings (§4.6), full layout analysis (§2.4), callout-number OCR (§4.5, needs easyocr host-side), and vision-language page QA (§10.1). Everything additive, s repository increasingly stands on its own (R12).
