

Figure vision — callouts · symbols · vision-language interface v1.3.3

📄 callouts.py \$4.5

- read numeric callout labels (Tesseract)
- with their positions
- link callout → leader line (dimscan)
- ties figure number → RPSTL part
- /api/callouts

CALLOUT OCR

📄 symbols.py \$4.8/4.11

- template-match schematic components
- + safety symbols (⚠ hazard)
- non-max suppression
- templates in index/symbols/
- no training, no GPU

SYMBOL DETECT

📄 vlm.py \$10.1

- ask a page image a question
- pluggable backend (drop-in)
- GPU model host-side (Qwen-VL/Donut)
- degrades cleanly if absent
- /api/vlm

VISION-LANGUAGE 🕒

Catalog essentially complete on the non-GPU span (R12)

📄 done: \$1.3/1.8 OCR prep · \$2.2/2.3/2.4/2.6 tables+layout+cleanup · \$3.2/3.6-3.11 semantic · \$4.5/4.8/4.11 figure vision · \$5.1-5.5/5.8 PDF-native · \$6.2 IETM · \$7.1/7.4/7.5 dedup+graph+cross-val. 🕒 (real capabilities) dimension geometry, \$4.9 barcodes, \$9.1 OCR-confidence, \$10.1 vision-language (interface ready — add a GPU model). The remaining 🕒 are only minor niceties (\$5.6 layers, \$5.7 glyph remap, \$6.1 publog expa on its own.
