

THE VIEWER v1.6.0 — Look-alike intelligence from PUBLOG + approximate 3-D (data flow)

Two same-name parts become a decisive answer; every part gets a dimensional 3-D sketch. Additive & rollbackable (R1); read-only (R6).

FOUNDATION — extended build_publog.py loads five more FLIS tables

V_FLIS_STANDARDIZATION ISC + related NSN (I&S)	V_MOE_RULE AAC (obsolescence)	V_FLIS_PHRASE TECH_DOC_NBR (→ manual)	V_H6_RELATED related item names	P_CAGE.status vendor active?
--	---	---	---	--

publogdiff.py — /api/publogdiff (two parts) · /api/publog_intel (one part)

1 · DIFF + FINGERPRINT align characteristics by MRC, highlight only differing rows, score % identical (fit-fingerprint)	2 · INTERCHANGE VERDICT GREEN interchangeable (I&S family) AMBER one-way substitute (supersede) RED not interchangeable + reason; substitutes + AAC obsolescence	3 · REF# + VENDOR decode RNCC/RNVC: exact vs 'similar, may differ'; flag inactive-vendor variants via CAGE status	4 · CROSSLINK + NICKNAME TECH_DOC_NBR → the manual; colloquial + related names; WARN on nickname clashes; /binaudit shelf scan
---	---	--	---

WHERE IT SHOWS

/publog	supersession · substitutes · vendors · tech-docs · nicknames cards + a '⇌ Compare' box (two-part diff + verdict).
/binaudit	scan a shelf of NSNs (hand scanner drops them in) → flags look-alike GROUPS + superseded/obsolete items.
/dossier	authoritative Federal-catalog card + the approximate-model card (below).

5 · APPROXIMATE 3-D / CAD FROM DIMENSIONS — dimscad.py · /api/dimscad

GRACEFUL DEGRADE & ROLLBACK

PUBLOG not built Every /api/publog* + the cards say so and the app is unchanged. BUILD-PUBLOG.bat (now 5 more tables) builds it.	Sparse data Missing ISC → verdict falls back to a characteristics-closeness estimate; missing dims → 'not enough' note. Never fabricates.
Authoritative, no links PUBLOG is the official part-identity source; corpus stays authoritative for procedures. Offline, no links (R11).	Rollback (R1) Delete publogdiff.py / dimscad.py + their routes/cards — each removes cleanly with zero impact on the rest.
