

Switchable layouts behind a Settings button — proposal

Consolidate today's scattered toggles into one Settings panel + named presets. Presentation only — the dataset, search, and the 104th flow never change.

PRESENTATION LAYER · what a layout changes

- Text size · density/compact · spacing
- Simple ↔ Advanced fields · which chrome shows
- Default match (All/Any) · viewer defaults
- **= CSS classes on <body> + a saved preference**

- settings only style the `thead`

X never cross into data / search / request

INVARIANT CORE · never changes with layout

- The dataset / index (server-side)
- Search (FTS5, NSN, Last-4, synonyms, ranking)
- End-to-end: modal → cart → tech gate → 104th PDF
- = **server endpoints; identical for every layout**

⚙ Settings

One place for everything that's a header button today.

LAYOUT PRESET

Shop floor / Touch

▼

Text size Normal · Large · X-Large

Density Comfortable · Compact

Fields

Simple · Advanced

Search match All words · Any word

Viewer Thumbnails / highlight defaults

Reset to default

saved on this device

NAMED PRESETS · each bundles the settings at left

Simple / Junior

Advanced / SME

All fields · compact density · every facet — max info for experts.

Shop floor / Touch

X-large text · big tap targets · high contrast — phone/tablet at the vehicle.

Compact / Desktop

Dense · small text · keyboard-first — most on screen at once.

WHY IT CAN'T BREAK THE PROGRAM

Layout state is CSS classes + a saved preference; it never alters the request payload, the search calls, or the dataset. Unknown/missing settings fall back to the default layout, and Reset-to-default is always one click — so a bad custom layout can't strand you (backwards-compatible & rollbackable, R1). The end-to-end process runs identically under every preset.

RECOMMENDATION:

Add a ⚙ Settings panel that absorbs the existing header toggles, plus the four presets above and a Reset. Persist per device. Verify each preset still passes the core flow (search → view → add → generate sheet).
