

PUB LOG via the FLIS Reading Room — direct CSVs (built)

v0.23.0 · No Windows app needed: the Reading Room publishes monthly CSVs. `enrich --publog-dir` merges them per NSN (append-only, R6). Correction to 0.22.x.

VERIFIED

Folder ingest of 3 Reading-Room-style files (Identification + Reference + Characteristics) for one NSN → a single merged record (name + part# + CAGE + characteristics), with 3 versions retained in `ref_nsn_log` (non-clobbering UPSERT + append-only). Only the download is heavy; the ingest is fast (your NSNs only).

CORRECTION & R6 NOTE

Earlier I said the PUB LOG fill needed DLA's Windows app + Batch/SQL export — the Reading Room makes that unnecessary; these are plain CSVs. And History.zip means even decommissioned NSNs in your corpus get nomenclature/part# — kept, never removed (R6).
