

# BUILT — Hi-fi loupe · correlations · pillar + mutation tests (v0.28.0)

The loupe now re-rasterises the REAL page region at high DPI (sharp at any zoom). Correlations the flat tables implied are connected in a deletable sidecar. The pillars are tested + mutation-checked.

## 1 · HIGH-FIDELITY LOUPE (server clip render)

## 2 · CORRELATIONS CONNECTED (additive sidecar — viewer.db untouched)

## 3 · PILLAR TESTS + MUTATION TESTING

Faults injected: flip the FSC vehicle test · AND→OR in search · last-4→last-3 · disable the NSN path · flip 'confidence IS NOT NULL' · wrong tech-status code · offset coverage % · hide interchangeability · reorder tech codes. Every one was caught.
