

BUILT — Tight, seamless loupe (v0.34.0)

The magnifier now tracks the cursor with ZERO latency and sharpens the instant you pause — no lag, no blank frames. All accessibility toggles share one responsive feel.

1 · INSTANT LOCAL ZOOM + SHARPEN-ON-PAUSE

while moving

local CSS zoom of the page image
follows cursor every frame (rAF) — instant, soft

when you pause (60 ms)

high-DPI crop swaps in (/page?clip=...)
crisp, real resolution — cached for revisits

- **rAF positioning**
one transform update per frame — no layout thrash, buttery follow
- **zero-latency base**
local magnification shows immediately; never a blank/white loupe
- **debounced fetch**
the server crop is requested only when the cursor settles (60 ms)
- **cell cache**
crops are keyed by region+zoom; revisiting a spot is instant
- **wheel to zoom**
scroll over the loupe to change magnification (1.8×–6×), live
- **cursor handoff**
the pointer hides and the loupe becomes the cursor — seamless

2 · ALL ACCESSIBILITY CONTROLS — ONE DYNAMIC FEEL

Active toggles share a state: accent border + subtle glow; smooth .12s transitions; press feedback (scale).
They compose cleanly — the loupe reflects Clean/contrast in its crop; HD raises full-page DPI; tilt/mirror are CSS overlays.

All presentation-only and reversible (R1/R6): none of these touch the page data, the index, search, or the 104th sheet. The loupe is the same real drawing, re-rasterised sharper — nothing invented.
