

BUILT — Hardware probe + autonomous adaptive OCR (v0.36.0)

Win11-first, best-effort back to Win7. The app scans your PC, grants the right resources, then runs OCR to 100% unattended on the best engine your hardware supports.

1 · CAPABILITY PROBE (before onboarding) -> sysprobe.py

2 · TIERS — RESOURCES SCALE TO THE PC (Win11-first, incomplete back to Win7)

tier	looks like	OCR	workers	dpi
GPU laptop / workstation	NVIDIA+CUDA, Win10/11	GPU PP-OCRv5	5-8	220
Strong CPU	8+ cores, 16GB+	CPU	6	200
Modest CPU	4 cores, 8GB	CPU	3	165
Legacy / low-power	2 cores / <8GB / Win7-8	CPU (best-effort)	1-2	130

Workers also capped by RAM (~1.2 GB each); laptop = thermal headroom; battery = throttled. GPU OCR is Win10+ (CUDA); Win7/8 -> CPU.

3 · AUTONOMOUS RUNNER -> run_ocr_auto.bat (unattended to 100%)
