

BUILT — 3D Library + Schematics Library + reset everywhere (v0.39.0)

Two dedicated, browsable collection pages reachable from the header, plus a Reset on every moveable view.

1 • TWO COLLECTION PAGES (linked from the home header)

📦 3D Library /3d

Every part with enough FLIS dimensions to render a representative 3D shape — 20,869 of them. Searchable, paginated grid; each card is a live mini 3D thumbnail.

Click → drag-rotate · scroll-zoom · ↻ reset · double-click reset
/api/threed?q=&limit=&offset= (ref_nsn with DIAMETER/LENGTH/...)

Self-contained renderer: family shape (cyl/hex/disc/box), material/colour tint, depth-shaded — NOT a CAD model (grounded).

📦 Schematics Library /schematics

Every schematic / wiring-diagram document in the corpus — 1,093 of them. Searchable by vehicle / TM / title / NSN; each card shows a rendered page-1 thumbnail.

Click → built-in page viewer: prev/next, 🧼 clean, zoom ±, ↻ reset
/api/schematics?q=&limit=&offset= (documents typed schematic/wiring)

Pages render on demand via /page; arrow keys page through.
Exploded-view RPSTL figures remain in the vehicle hub.

2 • RESET ON EVERY MOVEABLE / INTERACTIVE VIEW

- **Schematic page viewer** ↻ Reset clears tilt X/Y, zoom, and mirror back to the default view (sliders + buttons reset too).
- **Representative 3D viewer** ↻ Reset + double-click restores the default rotation + zoom.
- **3D Library cards** double-click or ↻ in the modal resets rotation/zoom.
- **Schematics viewer** ↻ Reset returns zoom to 100%.

Triggered by the user demonstrating tilt with no way to reset. Every transform now has a clearly-labelled Reset; presentation-only and reversible (R1).
