

BUILT — Explore schematics from every angle (v0.41.0)

The dedicated /schematics viewer now examines a sheet from the left, right, above, below — any angle — flips to the back, and jumps to the vehicle's other sheets.

1 · TILT TO ANY ANGLE + MIRROR (honest flat-sheet)

tilt X / tilt Y sliders (-70..70°) + ↔ mirror · CSS perspective — a real flat-sheet tilt, not invented depth.

2 · RELATED SHEETS + FULL CONTROL SET

Related-sheets rail

A filmstrip of the SAME vehicle's other schematic/wiring sheets (left-side, right-side, power, lighting...) — one click to switch. So every sensible view of the system is reachable, plus everything in between.

Per page: pan (drag) · zoom-to-cursor (wheel) · Clean · Blueprint · tilt X/Y · mirror · ↺ reset · ←/→ paging.

All on the REAL rendered page — themed, tilted and navigated, never altered.

THOROUGH, AND STILL GROUNDED (R1/R6)

'As thoroughly as possible': you can now examine a schematic from the left, the right, above, below, any angle in between, and the back — and hop across all the related sheets for that vehicle without leaving the viewer. It's presentation-only: the tilt is an honest flat-sheet rotation (CSS perspective), the mirror is a flip, and the page itself is never modified. A 2D schematic has no true hidden 3D, so we don't fabricate one — we let you explore the real sheet and its real companions fully.

Reachable from the home header (🔍 Schematics). Pairs with the 3D Library. OCR (in progress) will add full-text search inside these sheets.
