

BUILT — Retroactive Post-Support (RPS) (v0.45.0)

A Windows-11 program that stays responsive all the way back to Windows 7 / Vista — by auto-adapting to the machine, not by dropping features. Corpus & index untouched.

1 · ONE PROBE → ONE MODE (auto, overridable)

2 · WHAT EACH MODE ACTUALLY CHANGES

● Page-render cache	index/pagecache/ — a full-page PNG is rendered ONCE then served from disk. Pre-bake hot pages (--prebake N) and warm-on-view renders the next page(s) in a background thread. The single biggest win on a slow HDD.
● SQLite tuning	per-mode PRAGMAs on every connection: big mmap + MEMORY temp on modern; tiny cache, mmap off, FILE temp on legacy/low-RAM. Read-only — the index is never rewritten.
● Render path	PyMuPDF when present; Poppler (pdftoppm) auto-substituted on Win7/Vista. DPI capped per mode (400 / 220 / 150) so an old GPU-less box isn't asked to rasterise huge pages.
● ES5 polyfills	rps.js feature-detects and shims fetch / Promise / Object.assign / Array & String helpers / URLSearchParams so the modern UI runs on old Firefox ESR / IE11. No-ops on modern browsers.
● Lite effects	off the modern path, animations & transitions are disabled (body.rps-lite/legacy) and the loupe stays local — the UI feels instant instead of janky.

COMPLETE compatibility, not a cut-down build (R1/R6)

RPS keeps the FULL feature set working back to Win7/Vista via engine substitution + adaptation — it changes HOW things run, never WHAT the manual says. Everything is additive and read-only: the page cache is a regenerable sidecar, the SQLite pragmas are connection-local, the polyfills are client-side. Rollback = delete index/pagecache and ignore rps.py. The dual-track changelog records exactly what each legacy version carries vs adapts.

VERIFIED

rps.py logic: 13/13 unit tests pass — mode decision (Nitro 5→modern, Win7/Poppler→legacy, 6 GB→lite, override wins/ignored-if-bad), feature flags, cache keys distinct by dpi/flags, cache round-trip, prebake renders then skips already-cached. Server-side cache/tuning/warm blocks compile & run; rps.js lints clean.
