

BUILT — Workflow + Ops wave (v0.51 - v0.54)

Bringing it together for the shop floor and keeping an eye on the engine. Four additive features; each reads existing indexes and deep-links the cited page.

1

Job packet (/packet)

v0.51

- A take-to-the-bay sheet: the procedure (steps + tools + cautions) plus the parts-to-order table (NSN · UOC · CAGEC), with check-boxes and fillable bumper/WO fields.
- Light, print-optimised layout (@media print hides the chrome); one Print / Save-as-PDF button. Built from /api/procedure + /api/partdiff.
- Linked from the procedure page and the Solve-it hub.

Dependency-free (browser print); read-only; verify on the cited sheet (R1/R6).

2

Part dossier (/dossier)

v0.52

- One page per NSN that aggregates EVERYTHING: reference data, catalog figures, look-alike variants, the how-to procedure, the schematic and the 3-D model.
- Pulls /api/part + /api/reference + /api/partdiff + /api/procedure + /api/schematics + /api/threed and deep-links each.
- A single source of truth per part; jump-off buttons to packet / how-to / look-alike / solve.

Read-only aggregation of existing endpoints; the manual stays truth (R1/R6).

3

Find in manual (Ctrl+F)

v0.53

- The in-document Ctrl+F the mission asked for: type a term and jump between every match across the WHOLE open document — match count, per-page snippets, next/prev.
- /api/findindoc scopes the search to one document (fast); the match page opens with the term highlighted (reuses the page render hl=).
- Ctrl+F focuses the box; ▲▼ and Enter/Shift+Enter cycle matches.

Scoped, read-only; validated (3 hits/2 pages, doc-scoped) (R1/R6).

4

Ops dashboard (/ops)

v0.54

- One glance at engine health: runtime RPS mode, document & vehicle counts, page-cache size, snapshot count, searchable coverage per vehicle, and recent ingest/OCR runs.
- /api/ops (cheap signals, no full OCR scan) + /api/coverage + /api/audit. A file-integrity audit flags indexed PDFs now MISSING on disk (unplugged drive, etc.).
- Links to the live OCR Status page for the running percentage.

Read-only; cheap queries; audit validated (2/3 missing caught) (R1/R6).

THE ARC THIS COMPLETES

Find it (search + type-ahead) → understand it (look-alike, dossier) → do the job (procedure, Solve-it hub, job packet) → keep the corpus healthy (add documents, ops dashboard, file audit). Every feature this session is read-only and additive over the existing index, each deep-linking the real cited manual page; the mechanic's workflow is now one connected path, and the engine has an instrument panel.

VERIFIED

All page JS lints clean (node --check). New server functions (find_in_doc, ops_summary, file_audit) compile and pass synthetic tests; the 21-test feature regression suite + 23 pillars stay green. Mount-truncation in the sandbox handled via fragment-extraction + synthetic DBs; file tools authoritative for the host machine.
