

BUILT — OCR-driven page callouts (v0.60.0) · Batch 2 of 3

Turn the part numbers, NSNs and figure references buried in a page's text into clickable jumps — straight to the part dossier, Look-Alike Parts, or the cited figure.

VERIFIED

Isolation test of the extractor: on a native page, a dashed NSN and its bare-digit twin collapsed to one dossier link, two labeled part numbers and two FIG refs were found, and the NSN anchored to its word box. On an OCR-only page (no boxes) the same NSN + FIG came through as chips with no coords — exactly the fallback. Main-viewer callout JS and the Schematics chip loader both syntax-checked and run. Server function + /api/callouts route confirmed on the host.
