

BUILT — Smart Collections, four add-ons (v0.61.0)

You asked for these in plain terms. All still read-only on the index, sidecar-only writes — safe to use while the OCR scan runs.

🔍 Filter to one vehicle / manual

- A saved collection can be scoped to a vehicle (e.g. M1097) and/or a kind of manual (Operator -10, Maintenance -20/-24, Parts/RPSTL, Lubrication, Schematics, Troubleshooting).
- Manual-type matched with GLOB on a trailing boundary so '-20' lands on the TM's level code, NOT on the stock-class digits inside 9-2320 (that bug was caught + fixed in test).
- Scope pickers populate from a live vehicle list.

Less scrolling past the trucks/books you don't need.

📄 Show what's new

- Because a collection auto-fills as OCR runs, it can tell you what newly turned up: a green +N new badge.
- Opening a collection records its current size; next time, the badge shows how many pages appeared since.
- Baseline stored in a tiny collection_seen sidecar table (one row per collection) — never the main index.

A passive 'what just became searchable in my area' feed.

📌 Save a search in one click + pin

- A 📌 Save as collection button on the main results bar turns the search you just ran into a collection — name it and go.
- Pin (★) your most-used collections; pinned float to the top of the grid.
- All sidecar-only; pinning works for built-ins too (stores a row carrying their values).

Capture a good search; keep favourites on top.

📄 Group + take-to-bay sheet

- Group a collection's hits by vehicle or by manual so a long list is easy to scan.
- Print take-to-bay sheet builds a clean grouped table (vehicle · manual · page · excerpt) in a new window and prints it.
- Pulls up to 500 hits; uses the same live results.

Carry the list out to the work bay on paper.

VERIFIED

Scope isolation test on a temp index: operator (-10) manuals are correctly EXCLUDED from the Maintenance filter (the old LIKE '%-23%' wrongly matched 9-2320 — now fixed with a boundary GLOB); Parts resolves to -24P; vehicle scope narrows as expected. 'New' badge: opening set the baseline, an OCR-filled page then showed +1. collections.html JS syntax-clean and ES5-clean (0 arrow fns, 0 template literals); the main-page save button block syntax-checks. Server fns + pin route confirmed on host.
