

BUILT — 3D library, wired to the manuals (v0.62.0) · Batch 3 of 3

Open a representative 3D part and the side panel now shows the real TM pages that mention its NSN — pulled live from the OCR'd text — plus its dossier, look-alikes, and the collections it appears in.

VERIFIED · COMPLETES THE 3-BATCH OCR WIRING

Isolation test: the NSN phrase matched the dashed form on the right page (and correctly ignored an unrelated page); collection membership returned 'Torque specs', and after an OCR page added a WARNING mentioning the same NSN, 'Warnings' appeared too — the live-growth property. loadRefs JS syntax-checks; server function + `/api/threed_refs` route confirmed on host. With Batch 1 (collections), Batch 2 (page callouts) and this, the OCR text layer is now wired into search, the page/schematic viewers, collections, and the 3D library.
