

BUILT — Foundation batch, part 2: shared code + route smoke test (v0.65.0)

Removing duplication and widening the test net. This diagram itself is rendered by the new shared `_common.py` — dogfooding the cleanup.

📄 `patterns.py` — one home for the regexes

- NSN / FIG / labeled part-number patterns + `norm_nsn` / `digits` / `nsn_fts_phrase`, currently copied across `search`, `callouts`, and `threed_refs`.
- `tests/test_patterns.py` pins them: dashed+bare NSN canonicalize the same, FIG ranges, labeled P/N only, FTS phrase form. 9/9 pass.
- Modularization (#36) will switch the `viewer_app` copies to ``from patterns import ...``.

Single source of truth for part-token extraction.

📄 `_common.py` — shared diagram helpers

- The palette + `box/text/wrap/panel` were re-declared in all 78 generators; now they live in one module.
- Future `_make_*.py` do ``from _common import *`` and call `render(svg, base)`.
- This very diagram (79) is built with it — so it's proven, not theoretical.

78x duplication retired going forward.

📄 Route smoke test

- `tests/test_routes.py` starts the REAL server against the deterministic fixture index and hits every known route.
- Asserts NO 5xx (the server never crashes on a normal request) + valid JSON on `/api/*` and `/healthz`.
- Catches a broken route or handler the unit tests would miss.

Every endpoint exercised end-to-end.

📄 Wired into the one-button check

- `verify_all.py` now runs `test_patterns` + `test_routes` alongside `pillars` / `features` / `truncation`.
- `RUN-ALL-TESTS.bat` = `verify_all` + the RPS lint, host-side.
- So these additives are now part of the standing gate, not one-off checks.

New tests join the permanent harness.

VERIFIED: `patterns.py` compiles, `test_patterns` 9/9. `_common.py` renders this PDF (proof). `test_routes` + `verify_all` compile; the route suite runs host-side (imports `viewer_app`). RPS lint still green.
Next: the UI helper/CSS consolidation needs a careful pass (the \$ helper differs per page) — folded into the modularization/UI batch.

BUILT diagram: Dark (19), v0.65.0 — 2024-06-05 — `patterns.py` + `test_patterns` + `diagrams/_common.py` — `tests/test_routes.py` + `verify_all`. Additive (R1/R6).
