

BUILT — PUB LOG cross-reference · repository mode · keyword layer (v0.67.0)

Tap the full FLIS reference set for correlative data, browse without a parts sheet, and teach search the words mechanics actually use.

▣ PUB LOG cross-reference

- enrich_flis now matches every index NSN against the FLIS tables and adds: MANUFACTURER + location (P_CAGE via CAGE), colloquial/common name (V_COLLOQUIAL_NAME), interchangeable NSNs (V_FLIS_STANDARDIZATION -> alt_parts).
- Append-only (ref_nsn_log, R6), cited to PUB LOG, no schema change.
- ENRICH-PUBLOG.bat runs the full folder host-side.

Who makes it, what it's called, what swaps for it.

▣ Repository / browse mode

- Onboarding now has a 'Browse the repository' button -> skip the parts-request sheet and just search/browse (a Browse-mode chip shows it).
- An always-visible 'Parts session' button reopens the onboarding window to start/edit a 104th session anytime.
- It IS a dedicated repository now, not only a request tool.

Use it as a pure repository, or a request tool.

▣ Keyword / fuzzy layer

- keywords.json maps slang/functional words to nomenclature (zerk->grease fitting, turbo->turbocharger, charger->alternator). 47 groups, 309 terms.
- build_keywords.py folds in PUB LOG colloquial names.
- Loads beside synonyms.json into the offline search expansion.

Mechanics' words find the right part.

▣ YOU CAN TEACH IT: the user keyword/tag manager (/keywords)

Add your own groups of equivalent words (slang, common names, abbreviations, part numbers). They save to a keywords_user.json sidecar — kept separate from the curated sets — and LIVE-RELOAD into search immediately, no restart. Directly teaches the system your shop's words; indirectly improves every later search and the type-ahead. ES5-safe page (RPS gate covers it).

VERIFIED

Enrichment isolation-tested on synthetic FLIS CSVs (real headers): item name, part/CAGE, manufacturer+location, colloquial, interchangeable->alt_parts, cited description — PASS. Keyword expansion PASS (zerk->grease fitting, turbo->turbocharger, lug->terminal, +8). User keyword save/dedup/delete + live SYN reload PASS. keywords.html ES5-clean. All server functions + routes confirmed on host. Running app stays offline; enrichment reads local PUB LOG only.
