

Figures-first 3-D library (v0.82.0)

Interim measure: while the broader approximation work continues, the page leads with the parts that ALREADY have a real manual image.

TOGGLE — “include parts without a manual figure”

Default (off) = figures-first set described above. Checked = /api/threed?all=1 falls back to the full FLIS-dimension set (representative parametric shapes, some without a figure). The hint line states which mode you're in.

What changed

threed_list() defaults to figures_only=True and is sourced from parts (not ref_nsn), so membership is driven by 'a figure actually exists.' /api/threed honors ?all=1 for the old full set. threed.html: checkbox + mode hint + card uses server image_url.

Compatibility (R1) + rollback

Purely additive: the all=1 path preserves prior behavior; no schema change; corpus untouched. Front-end is no-cache so a normal reload picks it up; the server was restarted to load the Python change. Rollback = set threed_list default figures_only=False.
