

Onboarding hand-off: guided tour -> the real chooser (v0.83.1)

First run plays the tour inside the app, then drops the user into the genuine “Choose your side” modal — with no coach-marks.

Standalone (DEMO.bat / file://)

Same tour, but Finish has no parent app to message. It navigates to `http://127.0.0.1:8765/?onboard=1`, and the app honors `?onboard=1` by forcing the real chooser. So either way you end in the genuine modal.

Replay & escape hatches

“► Watch the guided tour” button in the chooser footer replays it anytime. A “Skip tour → choose side” button is pinned on the tour overlay. Returning users with a saved side never see the tour.

Compatibility (R1)

Additive and behavior-preserving: a saved side still bypasses everything; only the first-run path changed. iframe + postMessage + localStorage are all ES5/legacy-safe. Rollback = revert the index.html load block + the demo embed branch.
