

THE VIEWER — Dual-track changelog timeline (Modern + Legacy)

The Legacy / Retroactive Post-Support line branches from the modern track at the version it was created, and shows every backport. Versions: <base>-legacy.

Parity badges (per legacy entry in CHANGELOG-LEGACY.md):

✓ same feature ~ adapted (Poppler / Tesseract / lite UI) - N/A (GPU-only — speed, not a feature)

Modern history: CHANGELOG.md · Legacy history (starts at the branch point): CHANGELOG-LEGACY.md

To extend: add to MODERN / LEGACY / BACKPORTS in this generator and re-run (R4/R5/R7).
